SGH Program, Kobe-Sendai Interaction Program-Tokyo DR3 Project

Kobe-Sendai Interaction Program:DR3 Project is a program which is operated by the purpose as below.

1. Theme

Kobe University Secondary School SGH Program “Earthquake disaster, reconstruction and risk management”

Kobe-Sendai interaction program is based upon “Disaster・Reconstruction・Reduction・Resilience(DR3)”

2. Purpose

Both Kobe and Sendai have the experience of being an area affected by a great earthquake disaster. We can share and exchange ideas about what we can do to manage risk when a disaster happens.

Particularly, Kobe University Secondary School students will interact with High School and University students in the Sendai area and will have interactions to experience,

- (1) To learn together about the disaster which happened in the local area, or other natural disasters which may happen in the future
- (2) Visit the disaster areas and listen to the stories of the victims. Think about what we should do to share the story to the future generations.
- (3) Approach to the earthquakes from the humanities and natural sciences point of view. Students will experience a drilling investigation to find tsunami sediments.
- (4) Working together as a team, all students should learn how to care and help others.
